

## 品类范围广

75D-1200D，有光、无光、连续纺、传统纺。

## 产品经认证

使用经RCS认证的废旧纺织品回收浆。

## 溯源可检测

利用分子追踪技术，可出具专业的检测报告，能够做到全产业链透明追溯。

## WIDE RANGE OF CATEGORIES

75D-1200D bright, dull by continuous and centrifugal spinning

## PRODUCT CERTIFIED

Using RCS certified waste textile recycled pulp

## TRACEABLE AND TESTABLE

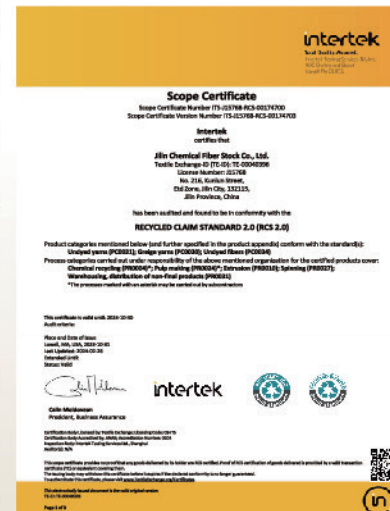

Using molecular tracking technology, issuing professional testing reports, transparent traceability throughout the whole industry chain

JIRECELL™是由30% CIRCULOSE®废旧纺织品回收浆和70%的FSC产销监管链认证的林木制成。在保留原有自然本质良好的透气性、吸湿性和柔软性的基础上，通过优化产品结构，实现了废旧纺织品在再生纤维素纤维领域的循环再利用，赋予了旧物料新的生命。减少对林木资源的依赖，降低纤维素的生产，从而实现低碳自由和推动建立可持续的纺织供应链。

JIRECELL™ is made from 30% CIRCULOSE® (recycled pulp from waste textiles) and 70% FSC certified forests. Besides keeps the original natural freatures of good breathability, moisture absorption and softness, it achieves the recycling and reuse of waste textiles in the field of regenerated cellulose fibers and gives new life to old materials by optimizing the product structure. It reduces the dependence on forest resources and cellulose production, achieves low-carbon freedom and promotes the establishment of sustainable textile supply chains.

JIRECELL™已经实现了工业化量产，产品品类涵盖范围广泛，可生产旦数从75D-1200D，既可以做有光长丝也可以做无光长丝，且既可以做连续纺也可以做离心纺。使得JIRECELL™在纺织领域具有广泛的应用前景，为推动纺织业的可持续发展做出了积极的贡献。

JIRECELL™ has achieved industrial mass production with a wide range of product categories from 75D to 1200D for bright and dull viscose rayon filament yarn by continuous and centrifugal spinning. Therefore, JIRECELL™ has a wide application prospects in the textile industry and makes a positive contribution to promote sustainable development of the textile industry.

可持续  
SUSTAINABLE  
更美好  
MORE BEAUTIFUL

随着人们对可持续生活的关注度不断提高，越来越多的品牌和消费者开始关注产品的可持续性。而JIRECELL™作为一种可持续生产的纤维，正符合这一趋势。它可以被用于制造各种可持续的服装、家居用品和其他消费品，为消费者提供更多可持续选择的同时，也有助于推动整个行业的可持续发展。

Along with the people's continuously increasing attention to sustainable life, more and more brands and consumers are concentrating the sustainability of products. As a sustainable fiber, JIRECELL™ meets this trend. It can be used to produce various sustainable clothing, household goods and other consumer goods. It provides consumers with more sustainable choices and meanwhile helps to promote the sustainable development of the entire industry.
